## Outcomes

| Nursing Process                                    | No of Points | Group Score | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------|--------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RN Assessment                                      | 31           | 85.4%       | The assessment step of the nursing process involves application of nursing knowledge to the collection, organization, validation and documentation of data about a client's health status. The nurse focuses on the client's response to a specific health problem including the client's health beliefs and practices. The nurse thinks critically to perform a comprehensive assessment of subjective and objective information. Nurses must have excellent communication and assessment skills in order to plan client care. |
| RN Analysis/Diagnosis                              | 64           | 75.2%       | The analysis step of the nursing process involves the nurse's ability to analyze assessment data to identify health problems/risks and a client's needs for health intervention. The nurse identifies patterns or trends, compares the data with expected standards or reference ranges and draws conclusions to direct nursing care. The nurse then frames nursing diagnoses in order to direct client care.                                                                                                                   |
| RN Planning                                        | 42           | 79.1%       | The planning step of the nursing process involves the nurse's ability to make decisions and problem solve. The nurse uses a client's assessment data and nursing diagnoses to develop measurable client goals/outcomes and identify nursing interventions. The nurse uses evidenced based practice to set client goals, establish priorities of care, and identify nursing interventions to assist the client to achieve his goals.                                                                                             |
| RN Implementation/Therapeutic Nursing Intervention | 82           | 85.9%       | The implementation step of the nursing process involves the nurse's ability to apply nursing knowledge to implement interventions to assist a client to promote, maintain, or restore his health. The nurse uses problem-solving skills, clinical judgment, and critical thinking when using interpersonal and technical skills to provide client care. During this step the nurse will also delegate and supervise care and document the care and the client's response.                                                       |
| RN Evaluation                                      | 21           | 84.7%       | The evaluation step of the nursing process involves the nurse's ability to evaluate a client's response to nursing interventions and to reach a nursing judgment regarding the extent to which the client has met the goals and outcomes. During this step the nurse will also assess client/staff understanding of instruction, the effectiveness of interventions, and identify the need for further intervention or the need to alter the plan.                                                                              |

| Fundamentals           | 26           | 84.4%       | Ability to apply fundamental nursing principles and skills to basic needs of clients. Topics include foundational client care concepts (ie: medical and surgical asepsis, infection control, physical assessment, therapeutic communication, medication administration, pain management integral to the delivery of safe, ethical, and legal nursing practice.                                                                             |
| Adult Medical-Surgical | 56           | 79.9%       | Ability to apply medical-surgical nursing knowledge to clinical problems experienced by adults. Topics include care of clients with cardiovascular, hematologic, gastrointestinal, neurosensory, endocrine, fluid and electrolyte, integumentary, lymph/immune/infectious, renal and urinary, musculoskeletal, reproductive, and respiratory disorders as well as topics relevant to perioperative nursing care and emergency care/triage. |
| Maternal Newborn       | 57           | 79.9%       | Ability to apply nursing knowledge to perinatal nursing care. Topics include antepartum, intrapartum, and postpartum nursing care as well as care of the newborn.                                                                                                                                                                                                                                                                          |
| Mental Health          | 27           | 91.0%       | Ability to apply nursing knowledge to the care of clients with mental health disorders. Topics include foundational mental health concepts (e.g., therapeutic communication, therapeutic milieu, legal/ethical issues), care of clients experiencing psychobiologic disorders or psychiatric emergencies, and care of clients receiving traditional nonpharmacological and psychopharmacological therapies.                                |
| Pediatric Nursing      | 34           | 72.5%       | Ability to apply nursing knowledge to clinical problems experienced by children. Topics include basic concepts (e.g., medication administration, physical assessment, nutritional needs), care of children with various system disorders, care of children experiencing pediatric emergencies (e.g., accidental poisoning, respiratory arrest), and care of children with psychosocial disorders.                                          |
| Leadership             | 19           | 84.7%       | Ability to manage the care of a caseload of clients and nursing care team while using principles of management and supervision. Topics include leadership skills (ie: interdisciplinary collaboration, advocacy, prioritization, delegation), performance improvement, continuity of client care, and principles of case management while ensuring safe client care and efficient utilization of human and material resources.             |
| Community Health       | 5            | 97.4%       | Ability to apply concepts related to public and community health. Topics include primary, secondary, and tertiary interventions, health screening, health related education, home health and injury prevention, disaster planning, and cultural diversity.                                                                                                                                                                                 |
| Pharmacology           | 11           | 86.6%       | Ability to apply concepts related to the pharmacodynamics and pharmacotherapeutics of commonly prescribed medications for clients with physical and mental health disorders. Topics include principles of medication administration and dosage calculation, side/adverse effects, drug/food interactions, contraindications, and nursing implications integral to the safe administration of medications to clients across the lifespan.   |
| Nutrition              | 5            | 82.6%       | Ability to apply nursing knowledge to normal nutrition and diet therapy. Topics include the collection of data regarding nutritional status; implementation of actions to promote normal nutrition or dietary modification in response to illness; and evaluation of the client's response to diet therapy.                                                                                                                                |

|-----------------------------------------|--------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Knowledge for Nursing Practice          | 30           | 81.6%       | Integration, translation, and application of established and evolving disciplinary nursing knowledge and ways of knowing, as well as knowledge from other disciplines, including a foundation in liberal arts and natural and social sciences. This distinguishes the practice of professional nursing and forms the basis for clinical judgment and innovation in nursing practice.                                                                       |
| Person-Centered Care                    | 35           | 85.7%       | Person-centered care focuses on the individual within multiple complicated contexts, including family and/or important others. Person-centered care is holistic, individualized, just, respectful, compassionate, coordinated, evidence-based, and developmentally appropriate. Person-centered care builds on a scientific body of knowledge that guides nursing practice regardless of specialty or functional area.                                     |
| Population Health                       | 11           | 87.7%       | Population health spans the healthcare delivery continuum from public health prevention to disease management of populations and describes collaborative activities with both traditional and non-traditional partnerships from affected communities, public health, industry, academia, health care, local government entities, and others for the improvement of equitable population health outcomes.                                                   |
| Scholarship for the Nursing Discipline  | 126          | 78.7%       | The generation, synthesis, translation, application, and dissemination of nursing knowledge to improve health and transform health care.                                                                                                                                                                                                                                                                                                                   |
| Quality and Safety                      | 28           | 86.0%       | Employment of established and emerging principles of safety and improvement science. Quality and safety, as core values of nursing practice, enhance quality and minimize risk of harm to patients and providers through both system effectiveness and individual performance.                                                                                                                                                                             |
| Interprofessional Partnerships          | 6            | 92.8%       | Intentional collaboration across professions and with care team members, patients, families, communities, and other stakeholders to optimize care, enhance the healthcare experience, and strengthen outcomes.                                                                                                                                                                                                                                             |
| Informatics and Healthcare Technologies | 1            | 100.0%      | Information and communication technologies and informatics processes are used to provide care, gather data, form information to drive decision making, and support professionals as they expand knowledge and wisdom for practice. Informatics processes and technologies are used to manage and improve the delivery of safe, high-quality, and efficient healthcare services in accordance with best practice and professional and regulatory standards. |
| Professionalism                         | 3            | 71.0%       | Formation and cultivation of a sustainable professional identity, including accountability, perspective, collaborative disposition, and comportment, that reflects nursing's characteristics and values.                                                                                                                                                                                                                                                   |

# Score Explanation and Interpretation

## Group Performance Profile

### PROBABILITY OF PASSING NCLEX-RN® ON THE FIRST ATTEMPT

The purpose of the “Predicted Probability of Passing NCLEX-RN on the First Attempt” is to provide a numeric indication of the likelihood of passing the NCLEX-RN at the student’s current level of readiness. For example, a student with a score of 71.3% correct would be expected to have a 90% chance of passing the NCLEX-RN on the first attempt. Although this is a high probability of success, it is not a guarantee. The table below summarizes student performance on this assessment as it relates to NCLEX success.

**RN COMPREHENSIVE PREDICTOR® EXPECTANCY TABLE**

| RN Comprehensive Predictor Individual Score | Predicted Probability of Passing the NCLEX-RN |
|---------------------------------------------|-----------------------------------------------|
| 80.7% to 100%                               | 99%                                           |
| 78.7% to 80.6%                              | 98%                                           |
| 74.7% to 78.6%                              | 95% to 97%                                    |
| 71.3% to 74.6%                              | 90% to 94%                                    |
| 69.3% to 71.2%                              | 85% to 89%                                    |
| 67.3% to 69.2%                              | 80% to 84%                                    |
| 64.7% to 67.2%                              | 70% to 79%                                    |
| 62.7% to 64.6%                              | 60% to 69%                                    |
| 60.7% to 62.6%                              | 50% to 59%                                    |
| 59.3% to 60.6%                              | 40% to 49%                                    |
| 56.7% to 59.2%                              | 30% to 39%                                    |
| 0% to 56.6%                                 | 1% to 29%                                     |

### ADJUSTED GROUP SCORE

The adjusted group score is the average of the adjusted individual total scores for this group of students. It is on a scale of 0% to 100%.

### ADJUSTED INDIVIDUAL TOTAL SCORE

To adjust for possible differences in difficulty among the forms of this assessment, the raw score (the total number of points received) is converted to the adjusted individual total score through a process known as equating. The adjusted individual total score is on a scale of 0% to 100%.

### ITEM SCORING

ATI follows NCSBN guidance for item scoring. Accordingly, each item is worth one or more points. Depending on the item-specific scoring method, a student’s response may earn full, partial, or no points.

### NATIONAL MEAN

This is the average score of all examinees.

### PROGRAM MEAN

This is the average score of all examinees within your specified program type.

### TOPICS TO REVIEW

Based on the questions missed on this assessment, a listing of content areas and topics to review is provided. A variety of learning resources can be used in the review process, including content, images, animations and videos in ATI’s Content Mastery Series® Review Modules, online practice assessments, and a focused review that is individualized to the questions missed.

### % OF GROUP MEETING INSTITUTION BENCHMARK

This is the percentage of students in this group who scored at or above your institution benchmark for this assessment. If your institution has not set a benchmark for this assessment, this field will be reported as “N/A.”
